1. (currently amended) A method of operating a communications network comprising:

a) measuring at each of a plurality of customer terminals usage by the respective customer terminal of network resources;

b) calculating a network usage charge from measurement data generated by said measuring at each of the plurality of customer terminals usage by the [the] respective customer terminal of network resources in step (a); and

c) sampling usage of the network resources by at least one of the customer terminals by performing:

(i) measuring a portion of the usage of the network resources by the at least one of the customer terminals; and

(ii) comparing data corresponding to the measurement of the network resources in step (c) (i), with respect to the sampled usage, with data corresponding to one or both of the usage of network resources measured by the at least one customer terminal in step (a) and the network usage charge calculated in step (b).

Art Unit: 3696

46. (currently amended) A method of operating a communications network having network resources and including a plurality of customer terminals operable to use the network resources, the method comprising:

- a) each terminal measuring the amount of network resources which [it] said each terminal uses; b) calculating a charge with respect to each terminal for [its] said each terminal's use of the network resources as determined by the respective terminal measuring the amount of network resources which [it] said each terminal uses in step (a); and
- c) performing a sampling step to check the validity of the measurement of the amount of network resources .performed by each terminal, wherein at some part of the network other than at the respective terminal, only a part of the total use of network resources made by the respective terminal is measured and compared with data corresponding to either the measurements of the amount of network resources taken by the respective terminal in step (a) or the charge calculated in step (b).

***Allowable Subject Matter***

Claims 1, 4-25, 30, 32, 33, and 39-46 are allowed.

The following is an examiner's statement of reasons for allowance: The closest prior art Crosskey et al. (US 6,035,281) discloses billing for the amount of bandwidth for each party based on a function of the share and client bandwidth usage. Crosskey et al. does not disclose measuring a portion of the usage of the network resources by at least one of the customer terminals and comparing the data corresponding to the measurement of the network resources with respect to the sampled usage, with data

Art Unit: 3696

corresponding to one or both of the usage of network resources measured by the customer terminal and the network usage charge calculated in step (b), and performing a sampling step to check the validity of the measurement of the amount of network resources performed by each terminal. Kirby et al. discloses the network determining a charging rate for a call dependent on a tariff relating to the charging rate to the bandwidth reserved and utilized by the call. Kirby does not disclose measuring a portion of the usage of the network resources by at least one of the customer terminals and comparing the data corresponding to the measurement of the network resources with respect to the sampled usage, with data corresponding to one or both of the usage of network resources measured by the customer terminal and the network usage charge calculated in step (b), and performing a sampling step to check the validity of the measurement of the amount of network resources performed by each terminal. Roche, Don, Jr. discloses an online log for windows that keeps track of a user's online sessions and estimates the cost of each session but does not disclose measuring a portion of the usage of the network resources by at least one of the customer terminals and comparing the data corresponding to the measurement of the network resources with respect to the sampled usage, with data corresponding to one or both of the usage of network resources measured by the customer terminal and the network usage charge calculated in step (b), and performing a sampling step to check the validity of the measurement of the amount of network resources performed by each terminal. Busse, I.: "Accounting management for global broadband connectivity services" discloses an accounting process that covers all of the steps from selecting a tariff during the
